

SR Mounting

TECHNICAL DATA

SRSLEEVE and SRHARDWARE

SRSLEEVE

This sleeve is supplied with Velcro swatches for mounting the SR Dual Receiver on a flat surface of camera, cart, rack, etc. The sleeve is sized and lined for a snug fit in a vertical or horizontal position.

To attach the right angle bracket, first insert and tighten the retaining pin (3/32 allen wrench provided) which keeps the bracket from rotating.

Thread the long phillips head screw through the sleeve and into the tension nut insert on the bracket.

For horizontal orientation, thread the shoe mount stud into the insert nut on the sleeve.

SRHARDWARE KIT

Kit includes spare retaining pin

Orient locking nut with flange toward the shoe mount

This optional adapter kit mounts the sleeve onto the shoe mount of a camera in either a vertical or horizontal orientation.

The insert nut in the sleeve and right angle bracket is an elliptical tensioning type. Use a wrench to thread the stud in about 1 turn, then rotate it to orient the receiver control panel in the desired direction. The threads will not bottom out.

The sleeve can also be mounted directly onto the tripod socket on the camera.

Use short screw through the sleeve to mount directly to the camera's tripod socket.

Remove retaining pin for flush mount.
